Endpoint Protection (formerly Symantec Endpoint Protection) has been on the market since 1992, and during the last years, it has become one of the most popular security applications worldwide. The product offers a hybrid anti-malware security product that allows you to protect your computer from any kind of malicious software. The first thing that catches your eye is the obvious and very practical interface. Endpoint Protection can be operated with a left and right mouse button, and the relevant keystrokes are easy to master. The programs are divided into three main groups: Security, Antispyware and Network. How does it work? The search bar at the top is convenient as it allows you to focus on the relevant groups instantly. Even when you are not in the Security section, the malware filter still operates as Endpoint Protection uses a cloud-based technology to identify and eliminate threats. You can simply activate the relevant filter by clicking on it. A brief description can also be displayed. The Spysweeper module enables you to detect the threat of Trojans and other harmful programs, while the AntiMalware module provides protection against infected files. The Windows Firewall provides on-demand protection against malware via the Deep Freeze module. The Network module can be used to view and manage all network connections, as well as the Internet protocol (IP) address that is used, and the MAC address. You can scan the network from work devices and see the traffic for any time period. You can open the network sockets and remove them from the list. Pros: The best thing about Endpoint Protection is its hybrid antivirus and antimalware features. These programs will protect your computer against a range of malware and, at the same time, help you identify and eliminate them. If a program needs to be cleaned, it can be done very quickly using the Endpoint Protection's toolkit, which will provide the relevant resources. It also allows you to add programs to the quarantine list as you wish. The program helps you keep your operating system running smoothly. If you accidentally run a program, Endpoint Protection will catch it and give you the chance to stop it. In addition, if there is a dangerous app, Endpoint Protection's software can stop it while running, as well as remove all data or settings that it might have on your hard drive. This way, your system will be protected against any harmful events. Endpoint Protection is easy to use and has a user-friendly interface. Cons
